

第一部分 游泳的作用和功能

Part I: The role and function of swimming

一、保障生命安全 Safeguard life

人类生活的地球上大约有四分之三的面积被水域覆盖，即使在内陆环境，当遭遇洪水泛滥时，难免要面对水灾的危险。只要会游泳，就有生存的希望，游泳是保证生存的重要条件之一。

About three-quarters of the world on which humans live is covered by water. Even in inland environments, when flooding occurs, it is inevitable to face the danger of flooding. As long as you can swim, there is hope for survival. Swimming is one of the important conditions for survival.

二、促进身心健康 Promote physical and mental health

游泳是最受欢迎的健身运动项目之一。适当地进行游泳锻炼，能够提高身体各个系统的机能，改善体质水平，增进心理健康。而且，游泳不容易造成急性运动伤害和肌肉劳损，是一项可以终身锻炼的健身运动。

Swimming is one of the most popular fitness programs. Proper swimming exercise can improve the function of various body systems, improve physical fitness and improve mental health. Moreover, swimming is not easy to cause acute sports injuries and muscle strain, it is a fitness exercise that can be exercised for life.

(一)改善呼吸和循环系统的功能

Improve the function of the respiratory and circulatory system

由于水的密度比空气大 800 余倍，人在水中受到的压力要远远大于在空气中，胸腔和腹腔在水中受到的压力增大，迫使人体的呼吸肌群用更大的力量进行呼吸。因此，经常游泳，可以增大呼吸肌的力量，提高呼吸系统的机能。游泳运动员的肺活量可以达到 4000~6000 毫升，甚至 7000 毫升以上，而一般人只有 3000~4000 毫升。

Since the density of water is more than 800 times greater than that of air, the pressure on people in the water is much greater than in the air. The pressure on the chest and the abdomen is increased in the water, forcing the body's respiratory muscles to breathe with greater force. Therefore, swimming often can increase the strength of the respiratory muscles and improve the function of the respiratory system. The swimmer's lung capacity can reach 4000-6000 ml, or even 7000 ml or more, while the average person only has 3000-4000 ml.

(二)改善肌肉系统的能力，塑造健美体形

Improve the muscle system's ability to shape bodybuilding

游泳是一项全身参与的运动，游泳时需要动员更多的肌肉群参与代谢供能，长期游泳能够使肌肉的力量、速度、耐力和关节的灵活性都得到提高。

Swimming is a full-body exercise. When swimming, you need to mobilize more muscle groups to participate in metabolic energy. Long-term swimming can improve muscle strength, speed, endurance and joint flexibility.

(三)预防疾病、康复治疗 Prevention of disease, rehabilitation

由于水的温度一般低于气温，水的导热能力又比空气强数十倍，因此人在水中散热的速度远快于在空气中。经常游泳能改善体温调节能力，增强机体抵御寒冷、适应环境的能力，可预防感冒等疾病。

Since the temperature of water is generally lower than the temperature, the heat conductivity of water is ten times stronger than that of air, so people can dissipate heat in water much faster than in the air. Regular swimming can improve the ability to regulate body temperature, enhance the body's ability to withstand cold and adapt to the environment, and prevent diseases such as colds.

由于游泳时身体平卧，加上浮力的作用，可以使脊椎充分伸展，对脊椎病人有一定的康复作用。

Because the body is lying flat during swimming, plus the effect of buoyancy, the spine can be fully extended, which has a certain rehabilitation effect on the spine patient.

游泳还可以作为运动处方，治疗一些慢性疾病。对于不适合直立锻炼的人群，如过度肥胖症患者、腰部或下肢受伤的人群等，如果采取跑步等方式，由于重力作用，腿部脚踝负担过重，容易导致受伤或使伤病加重。而游泳是很好的替代锻炼方式。

Swimming can also be used as a prescription for exercise to treat some chronic diseases. For people who are not suitable for upright exercise, such as people with obesity, people with injuries to the lower back or lower limbs, if they use running, etc., due to gravity, the ankles of the legs are overburdened, which may lead to injury or increase the injury. Swimming is a good alternative to exercising.

(四)促进心理健康和智能发展 Promote mental health and intelligent development

学习游泳需要克服一定的困难。例如，初学游泳的人，对水环境的陌生感容易使他们心生恐惧。学习游泳的过程，就是克服恐惧、寒冷、疲劳等困难的过程，对人的意志品质是很好的锻炼。

Learning to swim requires overcoming certain difficulties. For example, people who are new to swimming, the strangeness of the water environment is easy to make them fear. The process of learning to swim is to overcome the difficult process of fear, cold, fatigue, etc., and it is a good exercise for the quality of human will.

游泳对智能的发育也有好处。孔子说：“智者乐水”，老子说：“上善若水”。水的流动特性对身体平衡和游泳技术提出了许多特殊而微妙的要求。掌握游泳技术的过程就是神经系统和肌肉之间充分协调的过程，需要体会特殊的“水感”。这些对神经系统是良性的刺激，坚持游泳锻炼的人一定能从中得到益处。

Swimming is also good for the development of intelligence. Confucius said: "The wise man is happy with water," Lao Tzu said: "On the goodness of water." The flow characteristics of

water present many special and subtle requirements for body balance and swimming techniques. The process of mastering swimming techniques is a process of full coordination between the nervous system and the muscles, and it is necessary to experience a special "water sensation". These are benign stimuli to the nervous system, and those who insist on swimming can definitely benefit from it.

三、在生产建设和国防中的作用 Role in production and construction and national defense

水是我们生存环境的一部分。从古代大禹治水到现代的三峡工程，人类一直为怎样利用水为人类造福而努力着。国防、战争、治安也离不开游泳。如今，游泳也是军队、警察、民兵训练的主要内容之一。

Water is part of our living environment. From ancient Dagou water control to the modern Three Gorges Project, mankind has been working hard to use water for the benefit of mankind. National defense, war, and law and order are also inseparable from swimming. Today, swimming is also one of the main elements of military, police, and militia training.

四、竞技比赛，奥运争光 Competitive competition, Olympic glory

游泳是现代奥运会和国际体育比赛中非常重要的一个项目。现在奥运会中，游泳比赛的金牌数达到 35 枚，游泳和田径被称为“门面”项目。

Swimming is a very important project in the modern Olympic Games and international sports competitions. Now in the Olympic Games, the number of gold medals in swimming competitions has reached 35, and swimming and track and field are called "facade" events.

五、休闲娱乐，陶冶性情 Leisure, temperament

随着人民生活水平的提高和闲暇时间的增多，越来越多的人认识到了健身锻炼的重要性，游泳健身，海边度假、潜水冲浪等活动也逐渐成为新时尚。

With the improvement of people's living standards and the increase of leisure time, more and more people have realized the importance of fitness exercise. Swimming, fitness, seaside vacation, diving and surfing activities have gradually become new fashions.

第二部分 游泳运动的历史与发展

Part II: The history and development of swimming

一、游泳运动的起源 The origin of swimming

游泳是一种靠自身肢体动作的配合，利用水的自然性，使身体在水中移动的技能活动。人类的游泳是一种有意识的技能活动，它不是人类天生的本能，而是后天形成的技能。

Swimming is a skill activity that uses the naturalness of water to make the body move in the water. Human swimming is a conscious skill activity. It is not a natural instinct of human beings, but a skill formed by the day after tomorrow.

早期，为了生存，人们依山打猎、傍水捕鱼。在捕捉水中的鱼虾时、爬山涉水追猎动物时、当洪水泛滥时，人们都不可避免的要与水打交道；人们就在这些为生活、劳动与大自然作斗争的过程中，逐渐学会了游泳，并使游泳活动得到发展。

In the early days, in order to survive, people hunted and drowned in the mountains. When catching fish and shrimp in the water, climbing mountains and wading to hunt animals, when flooding, people are inevitably dealing with water; In the process of fighting for life, labor and nature, people gradually learned to swim and develop swimming activities.

我国古代的游泳可以概括为三种形式，即 涉-在浅水中行走，浮-在水中漂浮，没-在水下潜水。

Ancient Chinese swimming can be summarized in three forms, involved - walking in shallow water, floating - floating in water, sink - diving underwater.

游泳直到 19 世纪开始才得到普遍训练。1837 年，英国国家游泳协会成立，并开始举行比赛。早期大部分运动员都采用蛙泳或者类似的泳姿。19 世纪 70 年代，英国游泳教练 J. Arthur 到南美洲旅游，看到当地土著以左右手上下拨动方式来游泳，便将这种泳姿引入英国。成了后来著名的剪刀式踢腿爬泳。在 19 世纪 80 年代后期，一个叫 Frederick Cavill 的英国人到南海旅游，看到当地人爬泳时也在浅打水。Cavill 在澳大利亚定居后，在当地传授那种方式的爬泳，后来成了著名的澳大利亚式爬泳。

Swimming did not get universal training until the beginning of the 19th century. In 1837, the British National Swimming Association was established and began to hold competitions. Most of the early athletes used breaststroke or similar strokes. In the 1870s, British swimming coach J. Arthur traveled to South America to see the local indigenous people swimming in the way of the left and right hands. It became the famous scissor kick crawler. In the late 1880s, an Englishman named Frederick Cavill traveled to the South China Sea and saw locals swimming in shallow waters. After Cavill settled in Australia, he taught the way to crawl in the local area and later became the famous Australian-style crawler.

二、现代奥运会发展概况 Overview of the development of modern Olympic Games

1896 年游泳比赛使用了泽亚湾、1900 年用了巴黎塞纳河以及 1904 年使用了人造湖之后，1908 年伦敦奥运会首次使用游泳池作为游泳比赛场地。与北京 2008 年使用的 50 米长泳池不同，1908 年用的 100 米长泳池是建在径赛跑道上的。在 1908 年的伦敦奥运会举行期间，成立了国际游泳联合会。

After the 1896 swimming competition used Zea Bay, the Paris Seine River in 1900, and the artificial lake in 1904, the 1908 London Olympics used the swimming pool for the first time as a swimming competition venue. Unlike the 50-meter-long pool used in Beijing in 2008, the 100-meter-long pool used in 1908 was built on the track. During the London Olympics in 1908, the International Swimming Federation was established.

1896 年游泳被列入奥运比赛项目，第一届现代奥运会仅有男子 100 米、500 米、1200 米自由泳三个比赛项目。女子比赛从 1912 年斯德哥尔摩奥运会开始才有。随后逐渐增加了参赛项目，1908 年第四届奥运会时规定了比赛距离单位统一为‘米’

Swimming in 1896 was included in the Olympic Games, In the first modern Olympic Games, there were only three men's 100m, 500m and 1200m freestyle events. The women's competition was only from the 1912 Stockholm Olympics. Subsequently, the entries were gradually increased. In the 4th Olympic Games in 1908, the unit of the game distance was unified as ‘m’

1996 年第 26 届奥运会游泳比赛项目增加至 32 项

The swimming competition of the 26th Olympic Games in 1996 increased to 32

1973 年举办第一届世界游泳锦标赛，每四年一届

The first World Swimming Championships was held in 1973, every four years.

1990 年开始举办世界杯短池游泳系列赛，时间为每年的 11、12 月至次年的 1、2 月份在 25 米池进行

In 1990, the World Cup short-pool swimming series was held, which was held in the 25-meter pool from November to December of each year to January and February of the following year.

1993 年起，增加举办世界短池游泳锦标赛，每两年一届

Since 1993, the World Short-Sky Swimming Championships has been held every two years.

现在奥运会采用电子计时，可以达到百分之一秒的精确度

Now the Olympics use electronic timing, which can achieve an accuracy of one hundredth of a second.

三、我国游泳运动的发展 The development of swimming in China

19 世纪中，由欧美传入并逐渐流行，1887 年广州修建了 25 码室内泳池

In the mid-19th century, it was introduced and gradually popularized in Europe and America. In 1887, Guangzhou built a 25-yard indoor swimming pool.

1924 年第三届全运会，开始设有游泳项目

At the Third National Games in 1924, there was a swimming program.

1952 年 9 月在广州举行了新中国首次全国游泳竞赛大会

In September 1952, the first national swimming competition meeting in New China was held in Guangzhou.

1956 年国家体委制定并颁布了“游泳运动员技术等级标准”

In 1956,the National Sports Commission formulated and promulgated the "Technical Standards for Swimmers"

1959 年起举办全国运动会，每四年一届

The National Games was held in 1959, every four years.

1985 年开始举办全国青少年运动会游泳比赛

In 1985, the National Youth Games Swimming Competition was held.

1988 年把每年春秋两季的全国比赛改为全国冠军赛和全国锦标赛，并开始举办全国城市运动会与全国短池锦标赛

In 1988,the national competitions in the spring and autumn of each year were changed to national championships and national championships, and the National Urban Games and the National Short Pool Championships were held.

1998 年，国家体育总局推出“全民健身游泳锻炼标准”，成立“中国游泳协会成人委员会”在广州举办了首届“全国成人分龄游泳比赛”

In 1998,the State Sports General Administration launched the “National Fitness Swimming Exercise Standard” and established the “China Swimming Association Adult Committee” to hold the first “National Adult Ageing Swimming Competition” in Guangzhou.
